

Malaysia's Unique Approach on 5G Network Rollout

June 2024

Lagging earlier, Malaysia has narrowed the 5G availability gap by achieving 80.2% coverage of populated area in December 2023

- Definition of SA Population Coverage: Standalone 5G coverage of populated area
- Definition of Coverage of Populated Area (COPA): 5G coverage of at least 20 people per square kilometer.

~80.2% coverage of populated area achieved by end December 2023
As of April 2024, Malaysia has 39.2% 5G penetration rate amongst mobile subscribers

In 2021, the Government decided on the Single Wholesale Network (SWN) model by DNB to accelerate the implementation of 5G network in Malaysia

SWN refers to the **provision of 5G coverage**, delivered via **one common network**, to which all MCMC licensees in Malaysia can **seek equal access on a wholesale basis**.

SWN Benefits

- 1 **Implementation is accelerated and inclusive**
- 2 **Efficient use of existing infrastructure and resources**
- 3 **Lower costs for telcos and customers**
- 4 **Enables service competition and encourages innovation**
- 5 **Enabling national security controls and financial benefits for the Government**

The Government of Malaysia established Digital Nasional Berhad (DNB) as a Special Purpose Vehicle (SPV) fully owned by the Government, to implement a single 5G network nationwide.

DNB is subject to the conditions and rules set by the MCMC to ensure that the 5G network can be developed with:

- ✓ Accelerated deployment
- ✓ Lower cost
- ✓ Access to capacity and network is open and fair
- ✓ The wholesale price of the services provided can be controlled

DNB was established in March 2021 with the key objectives to accelerate (i) 5G deployment and (ii) 5G adoption to drive Malaysia’s digital economy

4G DEPLOYMENT ISSUES

4G deployment led to inefficient spectrum optimisation, high cost passthrough, high CAPEX incurred by Telcos, and a lack of focus in bridging urban rural divide

DNB OBJECTIVES

	DNB’s Objectives	Deliverables
1	Accelerate deployment of 5G network in Malaysia	80% national coverage within 3 years to catch up with countries in region
2	Ensure lower cost of capacity to accelerate 5G adoption	Benefit from scale to reduce cost of 5G capacity
3	Optimise use of existing infrastructure & scarce resources	Sufficient spectrum allocation to enhance efficiency and lower cost
4	Realise the potential of 5G in Malaysia to stimulate economic activity	5G expected to generate RM650 Billion GDP uplift with 750k new high-income jobs over next 10 years*
5	Promote service-based competition within the communications industry	Facilitating Telcos to innovate on services

*Source: Ernst & Young, Estimating the economic impact of the Single Wholesale 5G Network in Malaysia, November 2021

Challenges faced and lesson learnt to implement 5G network nationwide

Challenges

Solutions

Each Telcos had their **own complex networks**

DNB had to manage **six separate networks, and six distinct sets of systems and processes**

DNB had to ensure that the **SLA requirements of each network was met** without any conflict

Software upgrades and new rollouts had to **maintain total network availability and integrity**

A **multi-operator core network of this nature had never been built before**

DNB deployed a shared 5G network based on **Multi Operator Core Network (MOCN) model**. The model minimizes duplication and enable dynamic resource sharing for more flexible, efficient and fair usage of capacity

DNB was a startup, had to begin from the ground up

Qualified and experienced staff

Lengthy approval processes from local authorities

Close collaborations and support from local and state authorities

DNB deployed a shared 5G wholesale network based on the Multi-Operator Core Network (MOCN)

4G: each operator build and operate their own network

DNB's 5G MOCN: single network, shared with multiple operators

Multi-Operator Core Network

MOCN technology enables:

1. More efficient use of spectrum
2. Avoiding infrastructure duplication then reduces implementation costs
3. Fair and equal access to the accumulated spectrum

MOCN technology is used for spectrum efficiency and to lower the cost of 5G

Malaysia's DNB 5G network deployment meets the requirements for enterprises and rapid consumer adoption of 5G

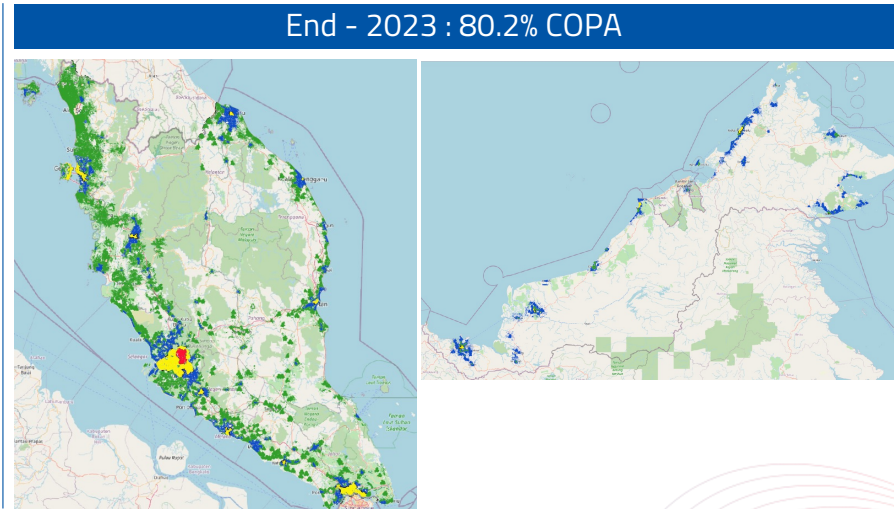

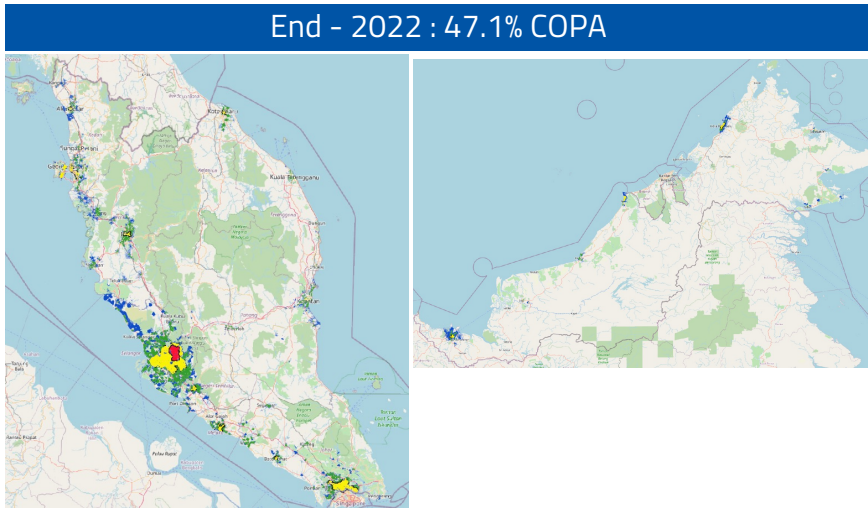

DNB Deployment Considerations	NSA & SA Architecture	Rationale
<p>DNB's supply-led model takes into account customer needs to fund aggressive rollout timeline</p> <p>Based on Telcos engagements & MCMC</p> <p>Current User Equipment readiness</p>	<p>EPC (Telcos' EPC)</p> <p>L700 NR3.5 NSA RAN</p> <p><i>Transitional state</i></p>	<p>Time-to-Market</p> <p>Telcos only have NSA-ready networks available. Therefore, deployment of SA-ready networks is dependent on Telcos' readiness</p> <p>Device Compatibility</p> <p>Most consumer 5G User Equipment in the market are NSA compatible at time of launch; new consumer models launched supports SA</p>
<p>SA architecture will be required to drive enterprise use cases</p>	<p>5GC</p> <p>NR700 NR3.5 SA RAN</p>	<p>True 5G Capabilities</p> <p>SA will be able to deliver wider range of use cases via uRLLC, mMTC capabilities for enterprises, and provide true 5G capabilities</p>

DNB has offered **5G SA Core as a Service to accelerate the adoption of enterprise use cases**. However, Telcos prefer to deploy its own SA Core to be integrated into DNB's 5G Radio Access Network ("RAN")

True 5G Capabilities availability critical for enterprises is dependent on the Telcos

In Dec 2023, DNB has met the accelerated target of 80% coverage of populated area, in just 2 years since the launch of 5G network services

Year	Actual					
	2021		2022		December 2023	
Coverage of Populated Areas	COPA % ¹	No of Sites	COPA%	No of Sites	COPA%	No of Sites
Dense Urban (DU)	n/a	408	5.0%	700	5.1%	734
Urban (U)	n/a	87	22.3%	1,716	28.2%	2,487
Suburban (SU)	n/a	5	16.1%	1,310	35.5%	2,854
Rural (R)	n/a	-	3.7%	180	11.4%	842
Overall COPA% / Sites	5.8%	500	47.1%	3,906	80.2%	6,917
Total Number of Population	1.58 mil		12.8 mil		26.2 mil	
Total Potential 5G Handsets	~650K		2 – 3 mil		8 – 10 mil	

Note:

¹COPA reporting by morphology to MCMC effective 2022

MCMC definition COPA - coverage that must be provided in areas of at least 20 persons per sq km

As of end April 2024, 81.5% coverage of populated area has been achieved

Target						
COPA (%)	Site Count	State	Integrated Sites ¹	Integrated COPA (%)	Onboarded Sites ²	On-Boarded COPA (%)
-	-	FEDERAL TERRITORIES	897		892	
97.7%	763	WP KUALA LUMPUR	749	97.7%	746	97.6%
97.3%	108	WP PUTRAJAYA	108	97.3%	108	96.3%

% Completed	97.7%	89.0%	90.6%	88.4%

5G rollout in Malaysia by DNB is one of the fastest in the world

Malaysia's 5G is now one of the world's best, thanks to the unconventional SWN

“I used to read GSMA reports. At the time, there was **no country in the world that rolled out 5G the way we do**. There were very few people who thought we could make it and I’m sure many perhaps wanted to be naysayers for various reasons, **yet we have proved all of them wrong**.”

YB Fahmi Fadzil, Minister of Communications, 26 Feb 2024

As a result of this innovative SWN approach, Malaysia have achieved an impressive **80% coverage of populated areas (COPA) in just two years**.

Since its launch more than two years ago, Malaysia's 5G network has consistently performed well, making it **one of the best-performing 5G networks worldwide**.

According to Ookla's Speedtest Intelligence® Q4 2023 data, **Malaysia continues to outperform other Southeast Asian countries** in 5G network performance.

Malaysia's 5G network performance has been globally recognised

OPENSIGNAL

Malaysian mobile operators are amongst the **highest ranked mobile operators globally for all categories in 5G Global Awards 2023**

Malaysia's 5G speed is recorded at 322.7 Mbps in Q2 2023, ranking us at **number 4 globally**, and **one of 7 markets** with speeds higher than 300 Mbps

Malaysia's **5G Consistency Score for Q4 2023 is the global winner** amongst countries which had successfully launched 5G commercially

Malaysia's median 5G speed is at 451.79 Mbps, ranking us the **fourth fastest in the world** and the **fastest in Southeast Asia as of Q4 2023**

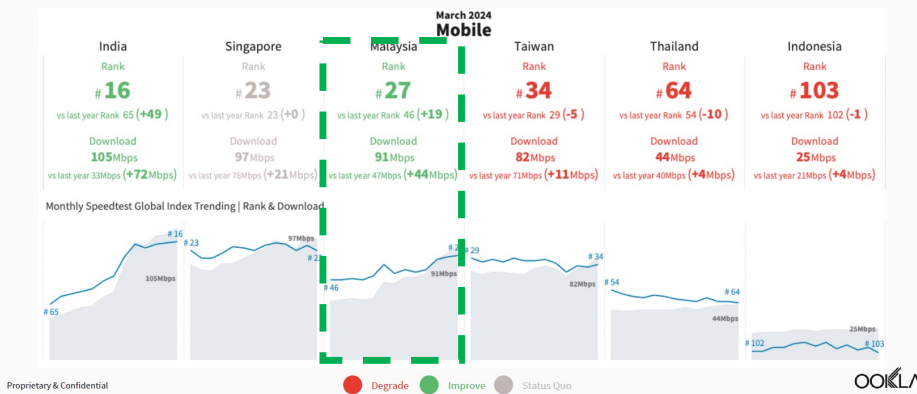

Glotel Awards 2023

Category: Managed Services Mastery
Winner: Ericsson and DNB - Data Driven Cognitive Operation Multi-Operator Core Network Environment

Glotel Awards 2022

Category: Best Vendor 5G Innovation
Winner: Ericsson and DNB - Multi-Operator Core Network and Dynamic Resource Partitioning for the Nationwide Wholesale 5G Network

Malaysia Mobile records a median Download 91Mbps Rank #27 – best ever, fuel by 5G migration

- 5G helped Malaysia to climb **59 places in the Ookla Speedtest Intelligence Global Index** ranking for mobile services across all technologies, from number 86 in September 2021, to **27th as of March 2024**.
- Malaysia is **ahead of neighboring countries, as well as some developed markets**, including the United Kingdom, Japan, and Germany

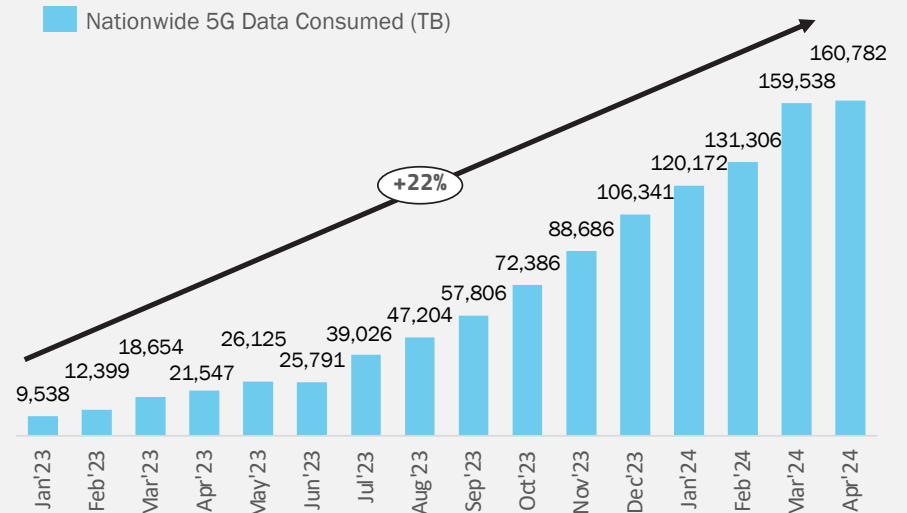

5G subscription and traffic have grown rapidly since 2023

5G Subscription in Malaysia [1]

- Malaysia has around 13.2 million 5G users as at end-April 2024, representing a 39.2% penetration rate
- This 11-fold increase from March 2023 to April 2024 represents an average of 24% growth per month

Nationwide 5G Data Consumed [2]

- Nationwide 5G data consumption has grown at a rate of 22% per month for the period of January 2023 to April 2024

In May 2023, Government announced that the 5G network to transition to Dual Network model

On 3 May 2023, Government announced that the 5G network in Malaysia:

1. will continue to be implemented through Digital Nasional Berhad (DNB) until 80% coverage of populated area (COPA) is achieved by end 2023; and
2. after which it will transition to a dual network model.

The decision is taken to **address the perception of monopoly** and **for a more transparent communication policy direction**. The government ensures that this new model will result to **no worse-off situation to consumers** in terms of **price** and **performance**.

Acceleration of 5G availability will drive significant economic benefits for Malaysia

Takeaway

STIMULATING ECONOMIC ACTIVITY

Malaysia's implementation of 5G technology will provide various economic, social, and technological benefits to the country's citizens and businesses

GDP uplift

RM650 billion (\$137 B) GDP uplift between 2022 - 2030

Drive FDI

Driving FDI and foreign companies to invest in Malaysia

JOB Creation

750,000 high value jobs created

Higher INCOME

Average salary per capita will increase when high-income jobs are created

Creating Unicorns

Solid connectivity infrastructure will provide a platform for creating Unicorns

Adoption of 5G Use Cases will generate positive impact on all Economic Sectors

There are 5 verticals and smart cities that are being focused on to drive 5G enterprise adoption

Manufacturing

Healthcare

Transportation

Agriculture

Energy

Smart Cities

Ongoing enterprise initiatives that leverage on transformational capabilities of 5G

	Manufacturing	Healthcare	Transportation	Agriculture	Energy	Smart Cities
Company	Clarion	KPJ Healthcare	Transocean	Sime Darby Plantation	Petronas	<ul style="list-style-type: none"> Putrajaya Ampang Jaya
Scope	Digitalised maintenance for optimal production	Innovative and optimized medical services	Effective logistics management	Improving productivity for higher yield	Autonomous onshore/offshore operations	Enhanced urban living
Use Cases	<ul style="list-style-type: none"> Video analytics to inspect on any defects Intelligent Storage Rack Automated Counter Machine Automated Guided Vehicle 	<ul style="list-style-type: none"> Hololens to display information, used by the medical practitioners during training or live operation 	<ul style="list-style-type: none"> Container vision application for defect inspection 	<ul style="list-style-type: none"> Smart crop management Real time precise fertilization spraying with 5G drone Smart workforce 	<ul style="list-style-type: none"> Drone for surveillance and inspection Robotics for field remote operation Head mounted tablet for video monitoring 	<ul style="list-style-type: none"> Autonomous transportation Smart surveillance Smart traffic management

On 3 May 2024, DNB and Ericsson signed series of MOUs to kickstart digitalization initiative to drive new telecommunications solutions

Establishment of "My5G Portal" - DNB's 5G Experience Centre – will augment 5G adoption by enterprises

Partnering with local and international solution partners to showcase 5G-enabled use cases across multiple industries

My5G Portal

a **state-of-the-art interactive centre** that offers a unique space showcasing over **50 use cases** cutting across **12 industry verticals**

Objectives

- Venue for companies, public services, academia and public to **embrace, understand** and **discover 5G solutions**
- Platform to **attract and nurture the next generation of talent** in developing 5G applications
- **Conducive environment for talent and ideas to thrive**, and to ensure that Malaysia remains at the forefront of the digital revolution
